Dialogue 7

Banked Tissue Research: Ethical and Legal Challenges

Jeffrey Botkin, M.D.
University of Utah

12 Noon, Thursday, April 18, 2002
Mailman Center, Room 4004A

Lunch will be provided

More than 300 million human biological specimens are being held for research and clinical purposes in the United States. Increasingly powerful analytic tools are making these specimens enormously valuable for research on genetic and environmental factors in disease. This presentation will discuss the emerging ethical, legal and policy concerns raised by the use of human tissues in research.

Dr. Botkin is a Professor of Pediatrics and Medical Ethics and an Adjunct Professor of Human Genetics at the University of Utah. His work is focused primarily on the ethical, legal and social implications of genetic technology. He chairs the Tissue Advisory Committee for the University of Utah and serves on several ethics advisory committees for national organizations involved in tissue-based research.

*Dialogues in Research Ethics* is a series of monthly conferences. For more information, phone UM Ethics Programs at 305-243-5723 or send E-mail to ethics@miami.edu.

Co-sponsors:
- Vice Provost for Research
- Office of Graduate Studies
- Department of Microbiology and Immunology
- UM Bioethics Program
- Research Service of the Miami VAMC
- S. Florida VA Foundation for Research and Education
- Department of Molecular and Cellular Pharmacology
- Mailman Center for Child Development
