Statistics & Values: Identifying & Managing Hidden Preferences in Data Analysis

Chris Feudtner, MD, PhD, MPH
The Children’s Hospital of Philadelphia

Noon, Friday, February 15, 2008
Mailman Center for Child Development, Room 3023

Lunch will be provided
(No RSVPs required)

What are some of the key value-based assumptions and preferences underlying the statistical analysis of medical data? This Dialogue will identify several of these assumptions, which often go unexamined, and how they relate to issues of distributive justice, risk preferences, assessments of benefit and harm, and the authority of knowledge. The goal is to invite reflection and dialogue regarding how these preferences are inextricably incorporated into statistical analysis, and how to manage these preferences in a transparent manner.

Dr. Feudtner is Director of Research and Attending Physician for the Pediatric Advanced Care Team, which provides palliative care services at The Children’s Hospital of Philadelphia, and Assistant Professor of Pediatrics at The University of Pennsylvania. He is Senior Fellow of the Center of Bioethics, of the Center of Clinical Epidemiology and Biostatistics, and the Leonard Davis Institute of Health Economics.

Dialogues in Research Ethics is a series of monthly conferences. For more information, phone UM Ethics Programs at 305-243-5723 or send E-mail to ethics@miami.edu.
