Are you a graduate student in science, engineering, medicine or a related research-intensive discipline interested in learning basic programming concepts?

Please Save The Date for the Software Carpentry Bootcamp Jan. 27-28, from 9 a.m. to 4:30 p.m., at the Newman Alumni Center on the Coral Gables Campus.

This two-day workshop, jointly hosted by the Miami Clinical and Translational Science Institute (CTSI) and the Center for Computational Science, will provide you with the skills and best practices needed to be productive in a small research team. This bootcamp will focus on the fundamentals of writing scripts and software to analyze data, with particular focus on R and Python programming languages.

Spaces will be limited, so please watch out for the registration announcements early in January and register promptly.
